

FDP6035AL/FDB6035AL

N-Channel Logic Level PowerTrench™ MOSFET

General Description

This N-Channel Logic Level MOSFET has been designed specifically to improve the overall efficiency of DC/DC converters using either synchronous or conventional switching PWM controllers.

These MOSFETs feature faster switching and lower gate charge than other MOSFETs with comparable $R_{DS(on)}$ specifications.

The result is a MOSFET that is easy and safer to drive (even at very high frequencies), and DC/DC power supply designs with higher overall efficiency.

Features

- 48A, 30 V. $R_{DS(on)} = 0.0125 \Omega @ V_{GS} = 10 \text{ V}$,
 $R_{DS(on)} = 0.017 \Omega @ V_{GS} = 4.5 \text{ V}$.
- Critical DC electrical parameters specified at elevated temperature.
- Rugged internal source-drain diode can eliminate the need for an external Zener diode transient suppressor.
- High performance trench technology for extremely low $R_{DS(on)}$.
- 175°C maximum junction temperature rating.

Absolute Maximum Ratings $T_c = 25^\circ\text{C}$ unless otherwise noted
