

THREE TERMINAL POSITIVE VOLTAGE REGULATORS
5V, 6V, 8V, 9V, 10V, 12V, 15V, 18V, 20V, 24V.

FEATURES

- Best Suited to Power Supply for TTL, C²-MOS.
- No External Part Needed.
- Built-in Thermal Protective Circuit.
- Max. Output Current 150mA ($T_j=25^\circ\text{C}$).
- Packaged in Power Mini.

MAXIMUM RATINGS ($T_a=25^\circ\text{C}$)

CHARACTERISTIC		SYMBOL	RATING	UNIT
Input Voltage	(5V 15V)	V_{IN}	35	V
	(18V 24V)		40	
Power Dissipation		P_D	500	mW
Operating Junction Temperature		T_j	-30 150	
Operating Temperature		T_{opr}	-40 85	
Storage Temperature		T_{stg}	-55 150

EXAMPLES OF TYPICAL CIRCUIT

(1) STANDARD APPLICATION

D1 : Protection Diode

High speed diode D1 should be connected as shown in the figure if the condition $V_{IN} < V_{OUT}$ might occur by surge voltage or power supply ON/OFF.

R_{SD} : Power limiting resistor for large V_{IN} , resistor R_{SD} is needed to limit IC power dissipation.

(2) A. CURRENT BOOST VOLTAGE REGULATOR

Heat sink is needed for Q1

$$R1 \leq \frac{V_{BE1}}{I_{B(MAX)}}$$

where, V_{BE1} : V_{BE} of external transistor Q1

$I_{B(MAX)}$: Quiescent current of IC

B. SHORT-CIRCUIT PROTECTION

$$R_{SC} = \frac{V_{BE2}}{I_{SC}}$$

where, I_{SC} : Short-Circuit current

(3) CURRENT REGULATOR

$$I_{OUT} = \frac{V_{OUT}}{R} + I_B$$

KIA78L05F~KIA78L24F

(4) VOLTAGE BOOST REGULATOR

$$V_{OUT} = V_Z + V_{OUT} (\text{of IC})$$

Apply current of several mA to R.

$$V_{OUT} = R_2 \left(I_B + \frac{V_{OUT} (\text{of IC})}{R_1} \right) + V_{OUT} (\text{of IC})$$

(5) NEGATIVE REGULATOR

(6) POSITIVE AND NEGATIVE REGULATOR

PRECAUTIONS FOR USE

When such a high voltage as exceeds 10V beyond the fixed output voltage(Typ. value) of is applied to its output terminal, IC may be destroyed. In this case, connect a zener diode between the output terminal and GND to prevent application of excessive voltage. In particular, in such a current boosting circuit as shown in application circuit example(2), if input voltage is suddenly applied by stages and furthermore load is light, excessive voltage may be applied transiently to the output terminal of IC. In such a case as this, it may become necessary to increase capacity of output capacitor as appropriate, use a smaller R1(a resistor for bypassing IC bias current) or gradually rise input voltage in addition to use of a zener diode as mentioned above.

SOLDERING

Flat Package (SOT-89 Package)

Elements mounting styles of electronic devices are gaining in further diversification over recent years, and needs for components are all the more expanding in varieties. Especially, surface mounting is steadily penetrating into industrial segments as a world-wide popular technical trend. Although exposure to high temperature is inevitable during soldering we recommend limiting the soldering temperature to low levels as shown in figure for the sake of retaining inherent excellent reliability.

Fig 6

(a) When employing solder reflow method

Atmospheric temperature around resin surfaces must be less than 240°C, not exceeding the time length of 10 sec.

Recommend temperature profile

Precautions on heating method

When resin is kept exposed to high temperature for a long time, device reliability may be marred.

Therefore, it is essential to complete soldering in the shortest time possible to prevent temperature of resin from rising.

(b) When employing halogen lamps or infrared-ray heaters

When halogen lamps or infrared-ray heaters are used, avoid direct irradiation onto resin surfaces; such devices cause extensive localized temperature rise.

Please keep a reflow solder operating when SOT-89 package's soldering.
