

## LC75824E, 75824W

## 1/4 Duty General-Purpose LCD Display Driver

## Overview

The LC75824E and LC75824W are 1/4 duty general-purpose LCD display drivers that can be used for frequency display in electronic tuners under the control of a microcontroller. In addition to being able to directly drive up to 204 LCD segments, the LC75824E and LC75824W can also control up to 12 general-purpose output ports.

## Features

- Support for 1/4 duty 1/2 bias or 1/4 duty 1/3 bias drive of up to 204 segments under serial data control
- Serial data input supports CCB\* format communication with the system controller.
- Serial data control of the power-saving mode based backup function and all the segments forced off function
- Serial data control of switching between the segment output port and general-purpose output port functions
- Serial data control of the normal mode current drain
- High generality since display data is displayed directly without decoder intervention.
- The  $\overline{\text{INH}}$  pin can force the display to the off state.
- RC oscillator circuit

- CCB is a trademark of SANYO ELECTRIC CO., LTD.
- CCB is SANYO's original bus format and all the bus addresses are controlled by SANYO.

## Package Dimensions

## Pin Functions

Pin	Pin No.	Function		Active	I/O	Handling when unused
S1/P1 to S12/P12, S13 to S51	1 to 12, 13 to 51	Segment outputs for displaying the display data transferred by serial data input. Pins S1/P1 to S12/P12 can be used as general-purpose output ports when so specified by the control data.		—	O	Open
COM1 to COM4	52 to 55	Common driver outputs. The frame frequency $f_O$ is given by: $f_O = (f_{OSC}/512)$ Hz.		—	O	Open
OSC	60	Oscillator connection. An oscillator circuit is formed by connecting an external resistor and capacitor to this pin.		—	I/O	GND
CE	62	Serial data transfer inputs. These pins are connected to the microcontroller.	CE: Chip enable	H	I	GND
CL	63		CL: Synchronization clock		I	
DI	64		DI: Transfer data	—	I	
$\overline{INH}$	61	Display off control input • $\overline{INH}$ = low ( $V_{SS}$ ) .....Display forced off Pins S1/P1 to S12/P12 = low (These pins are forced to the segment output port function and held low.) S13 to S51 = low COM1 to COM4 = low • $\overline{INH}$ = high ( $V_{DD}$ ) .....Display on Note that serial data transfers can be performed when the display is forced off.		L	I	GND
$V_{DD1}$	57	Used to apply the LCD drive 2/3 bias voltage. Short this pin to $V_{DD2}$ if a 1/2-bias drive scheme is used.		—	I	Open
$V_{DD2}$	58	Used to apply the LCD drive 1/3 bias voltage. Short this pin to $V_{DD1}$ if a 1/2-bias drive scheme is used.		—	I	Open
$V_{DD}$	56	Power supply. Provide a voltage of between 3.0 and 6.0 V.		—	—	—
$V_{SS}$	59	Ground. Connect this pin to the system ground.		—	—	—

## Serial Data Input

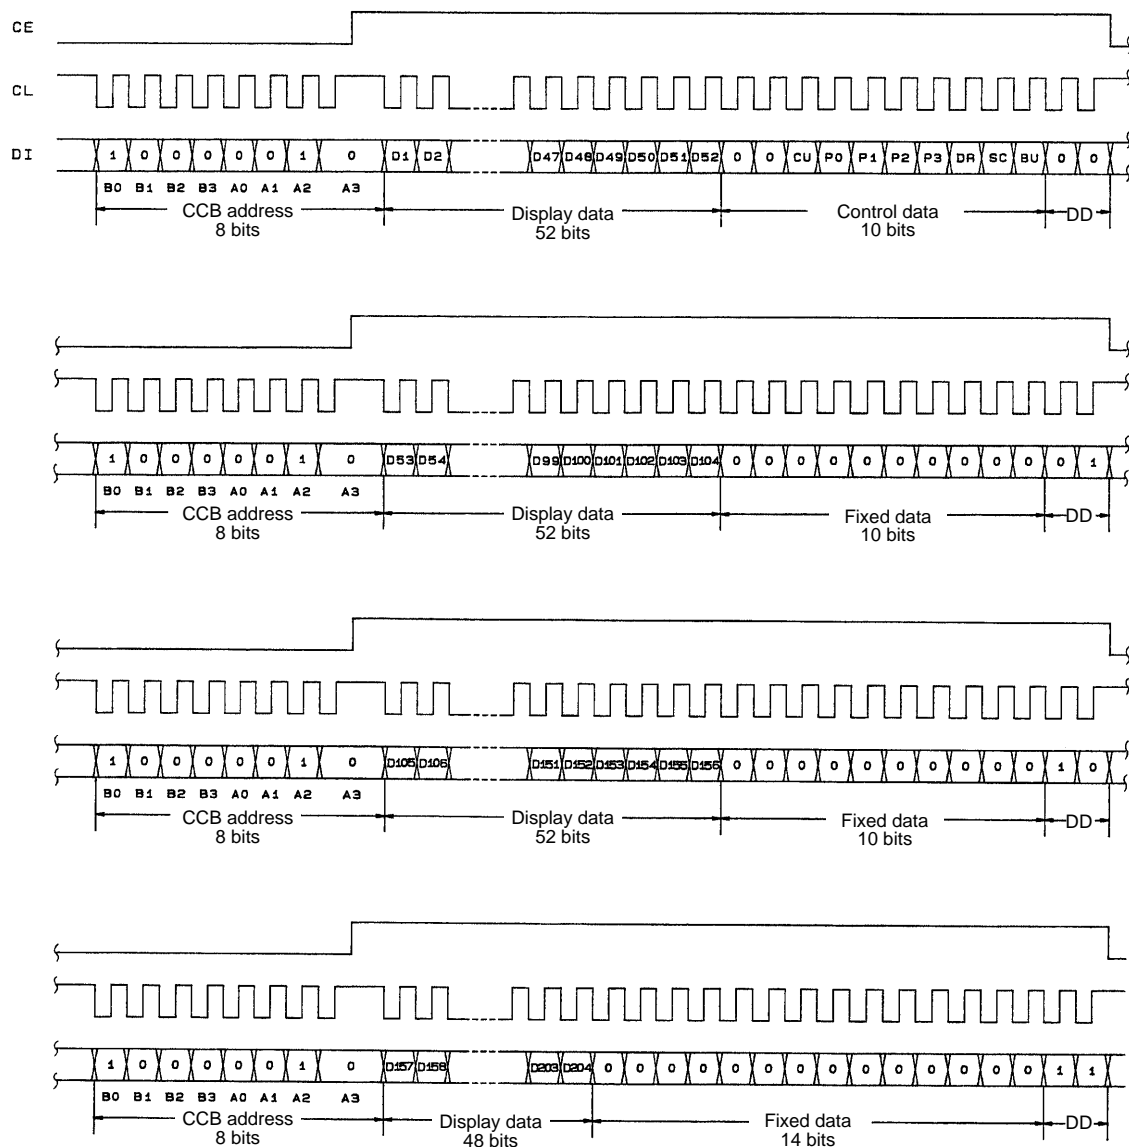

### 1. When CL is stopped at the low level

A04756

Note: DD is the direction data.

## 2. When CL is stopped at the high level

A04759

Note: DD is the direction data.

- CCB address.....41H
- D1 to D204.....Display data
- CU .....Normal mode current drain control data
- P0 to P3.....Segment output port/general-purpose output port switching control data
- DR .....1/2-bias drive or 1/3-bias drive switching control data
- SC.....Segments on/off control data
- BU .....Normal mode/power-saving mode control data

Serial Data Transfer Examples

- 1. When 157 or more segments are used  
All 256 bits of the serial data must be sent.

- 2. When fewer than 157 segments are used  
Either 64 bits, 128 bits, or 192 bits of serial data must be sent, depending on the number of segments actually used.  
However, the serial data shown in the figure below (the display data D1 to D52 and the control data) must always be sent.

## Control Data Functions

### 1. CU: Normal mode current drain control data

This control data bit controls the current drain in normal mode.

CU	Current drain mode in normal mode
0	Normal current drain mode ( $I_{DD2}$ , $I_{DD3}$ , $I_{DD4}$ , and $I_{DD5}$ )
1	Low current drain mode ( $I_{DD6}$ , $I_{DD7}$ , $I_{DD8}$ , and $I_{DD9}$ )

However, note that the common and segment output waveforms are easily caused distortion when the low current drain mode is selected by setting CU to 1, because in this mode the capacity to supply current to the LCD panel from the common and segment pins is mode less than that in the normal current drain mode (CU = 0).

### 2. P0 to P3: Segment output port/general-purpose output port switching control data

These control data bits switch the segment output port/general-purpose output port functions of the S1/P1 to S12/P12 output pins.

Control data				Output pin states											
P0	P1	P2	P3	S1/P1	S2/P2	S3/P3	S4/P4	S5/P5	S6/P6	S7/P7	S8/P8	S9/P9	S10/P10	S11/P11	S12/P12
0	0	0	0	S1	S2	S3	S4	S5	S6	S7	S8	S9	S10	S11	S12
0	0	0	1	P1	S2	S3	S4	S5	S6	S7	S8	S9	S10	S11	S12
0	0	1	0	P1	P2	S3	S4	S5	S6	S7	S8	S9	S10	S11	S12
0	0	1	1	P1	P2	P3	S4	S5	S6	S7	S8	S9	S10	S11	S12
0	1	0	0	P1	P2	P3	P4	S5	S6	S7	S8	S9	S10	S11	S12
0	1	0	1	P1	P2	P3	P4	P5	S6	S7	S8	S9	S10	S11	S12
0	1	1	0	P1	P2	P3	P4	P5	P6	S7	S8	S9	S10	S11	S12
0	1	1	1	P1	P2	P3	P4	P5	P6	P7	S8	S9	S10	S11	S12
1	0	0	0	P1	P2	P3	P4	P5	P6	P7	P8	S9	S10	S11	S12
1	0	0	1	P1	P2	P3	P4	P5	P6	P7	P8	P9	S10	S11	S12
1	0	1	0	P1	P2	P3	P4	P5	P6	P7	P8	P9	P10	S11	S12
1	0	1	1	P1	P2	P3	P4	P5	P6	P7	P8	P9	P10	P11	S12
1	1	0	0	P1	P2	P3	P4	P5	P6	P7	P8	P9	P10	P11	P12

Note: Sn (n = 1 to 12): Segment output port function

Pn (n = 1 to 12): General-purpose output port function

When the general-purpose output port function is selected the output pins and the display data have the correspondence listed in the tables below.

Output pin	Corresponding display data
S1/P1	D1
S2/P2	D5
S3/P3	D9
S4/P4	D13
S5/P5	D17
S6/P6	D21

Output pin	Corresponding display data
S7/P7	D25
S8/P8	D29
S9/P9	D33
S10/P10	D37
S11/P11	D41
S12/P12	D45

For example, when the general-purpose output port function is selected for the S4/P4 output pin, that output pin will output a high level when display data D13 is 1, and will output a low level when D13 is 0.

**3. DR: 1/2 bias drive or 1/3 bias drive switching control data**

This control data bit selects either 1/2 bias drive or 1/3 bias drive.

DR	Drive type
0	1/3 bias drive
1	1/2 bias drive

**4. SC: Segments on/off control data**

This control data bit controls the on/off state of the segments.

SC	Display state
0	On
1	Off

However, note that when the segments are turned off by setting SC to 1, the segments are turned off by outputting segment off waveforms from the segment output pins.

**5. BU: Normal mode/power-saving mode control data**

This control data bit selects either normal mode or power-saving mode.

BU	Mode
0	Normal mode
1	Power-saving mode. In this mode the OSC pin oscillator is stopped and the common and segment pins output low levels. However, the S1/P1 to S12/P12 output pins can still be used as general-purpose output ports under the control of the control data bits P0 to P3.

## Display Data to Output Pin Correspondence

Output pin	COM1	COM2	COM3	COM4

## Display Control and the $\overline{\text{INH}}$ Pin

Since the LSI internal data (the display data D1 to D204 and the control data) is undefined when power is first applied, applications should prevent meaningless displays with the following procedure. First, set the  $\overline{\text{INH}}$  pin low at the same time as power is applied to turn off the display. This will set the S1/P1 to S12/P12, S13 to S51, and COM1 to COM4 pins low. While the  $\overline{\text{INH}}$  pin is held low, the microcontroller should send the serial data. Finally, the application can set the  $\overline{\text{INH}}$  pin to high. (See Figure 3.)

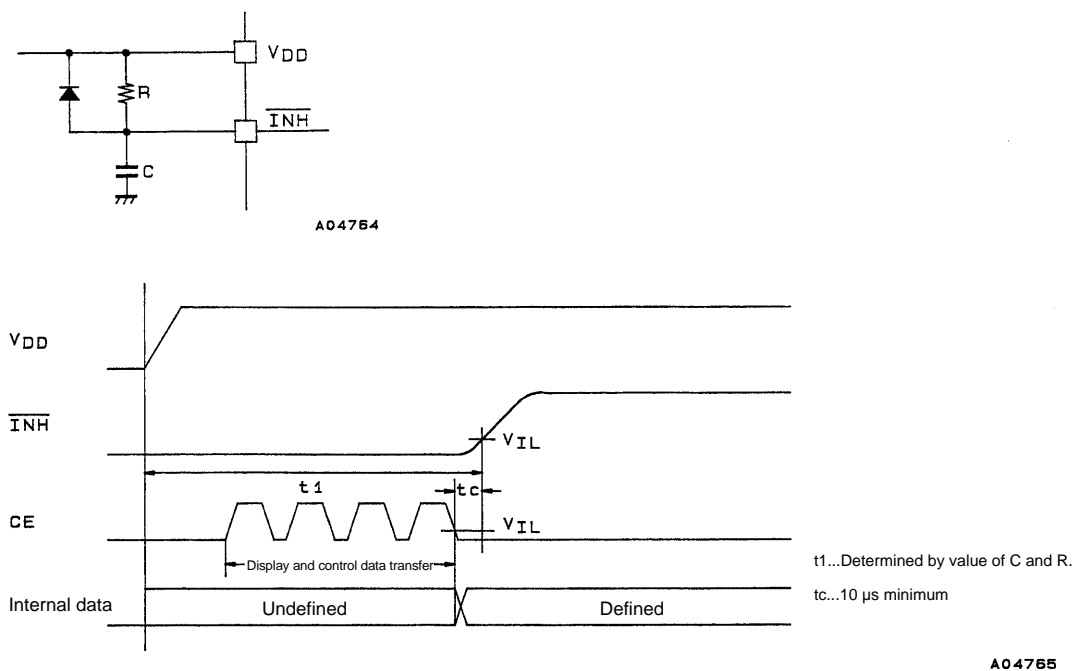

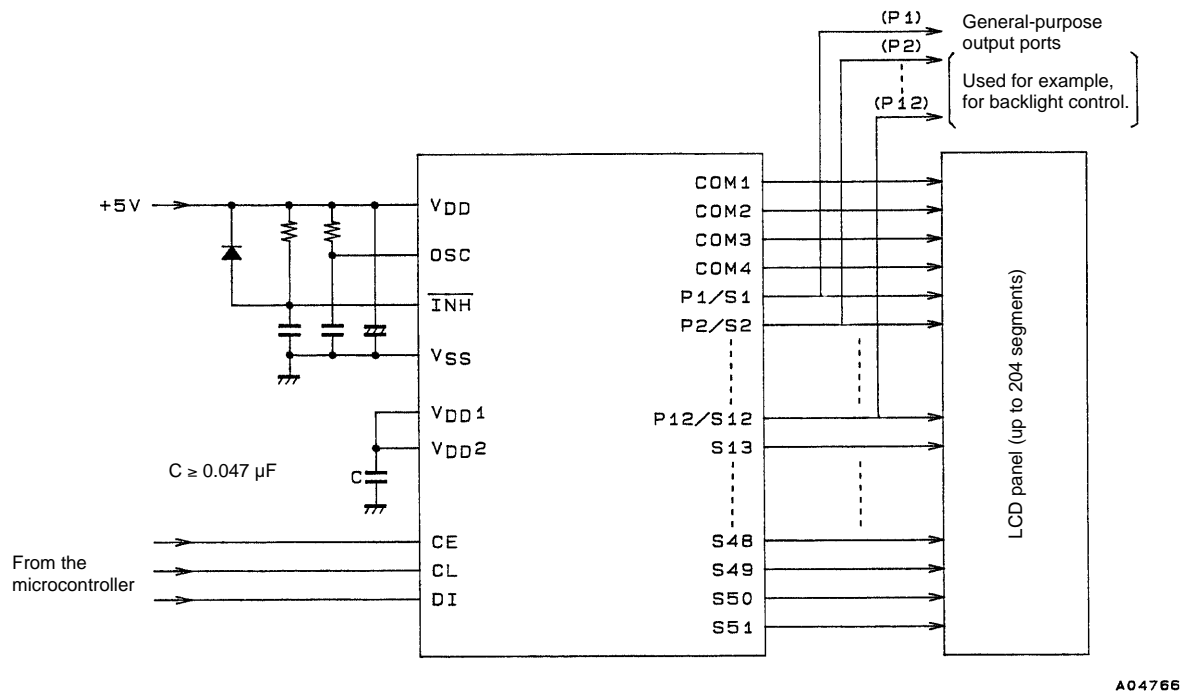

Figure 3

## Notes on Microcontroller Transfer of Display Data

Since the LC75824E and LC75824W accept the display data divided into four separate transfer operations, we recommend that applications make a point of completing all four data transfers within a period of no more than 30 ms to guarantee the quality of the displayed image.
