

## LM78MXX Series 3-Terminal Positive Voltage Regulators

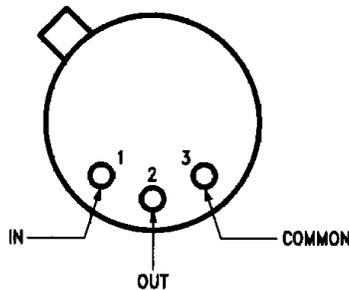

### General Description

The LM78M00 series of 3-terminal medium current positive voltage regulators employ internal current-limiting, thermal shutdown and safe-area compensation making them essentially indestructible. If adequate heat sinking is provided, they can deliver in excess of 0.5A output current. They are intended as fixed voltage regulators in a wide range of applications including local (on-card) regulation for elimination of noise and distribution problems associated with single-point regulation. In addition to use as fixed voltage regulators, these devices can be used with external components to obtain adjustable output voltages and currents.

### Features

- Output current in excess of 0.5A
- No external components
- Internal thermal overload protection
- Internal short circuit current-limiting
- Output transistor safe-area compensation
- Available in JEDEC TO-220 and TO-39 packages
- Output voltages of 5V, 6V, 8V, 12V, 15V, and 24V

## Absolute Maximum Ratings

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Storage Temperature Range	
TO-39 Metal Can	-65°C to +175°C
TO-220 Package	-65°C to +150°C
Operating Junction Temperature Range	0°C to +150°C

Lead Temperature	
TO-39 Metal Can (Soldering, 60 sec.)	300°C
TO-220 Package (Soldering, 60 sec.)	265°C
Power Dissipation	Internally Limited
Input Voltage	
5.0V to 15V	35V
24V	40V
ESD Susceptibility	(to be determined)

## Typical Performance Characteristics (Continued)

TL/H/10053-5

TL/H/10053-6

### Design Considerations

The LM78MXX fixed voltage regulator series has thermal-overload protection from excessive power, internal short circuit protection which limits the circuit's maximum current, and output transistor safe-area compensation for reducing the output short circuit current as the voltage across the pass transistor is increased.

Although the internal power dissipation is limited, the junction temperature must be kept below the maximum specified temperature (+125°C for LM78MXXC) in order to meet data sheet specifications. To calculate the maximum junction temperature or heat sink required, the following thermal resistance values should be used:

Package	Typ $\theta_{JC}$	Max $\theta_{JC}$	Typ $\theta_{JA}$	Max $\theta_{JA}$
TO-39	18	25	120	140
TO-220	3.0	5.0	60	40

$$P_{D \text{ Max}} = \frac{T_{J \text{ Max}} - T_A}{\theta_{JC} + \theta_{CA}} \text{ or}$$

$$= \frac{T_{J \text{ Max}} - T_A}{\theta_{JA}} \text{ (Without a Heat Sink)}$$

$$\theta_{CA} = \theta_{CS} + \theta_{SA}$$

Solving for  $T_J$ :

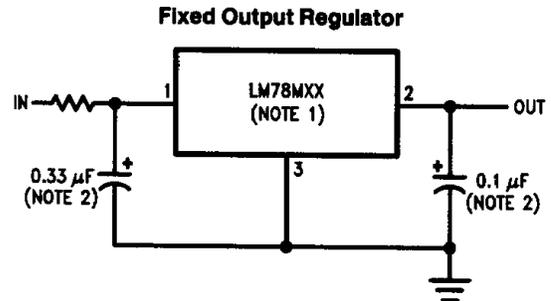

$$T_J = T_A + P_D (\theta_{JC} + \theta_{CA}) \text{ or}$$

$$= T_A + P_D \theta_{JA} \text{ (Without a Heat Sink)}$$

Where:

- $T_J$  = Junction Temperature
- $T_A$  = Ambient Temperature
- $P_D$  = Power Dissipation
- $\theta_{JC}$  = Junction to Case Thermal Resistance
- $\theta_{CA}$  = Case-to-Ambient Thermal Resistance
- $\theta_{CS}$  = Case-to-Heat Sink to Resistance
- $\theta_{SA}$  = Heat Sink-to-Ambient Thermal Resistance
- $\theta_{JA}$  = Junction-to-Ambient Thermal Resistance

### Typical Applications

TL/H/10053-7

**Note 1:** To specify an output voltage, substitute voltage value for "XX".

**Note 2:** Bypass capacitors are recommended for optimum stability and transient response and should be located as close as possible to the regulator.
