**(Note)**

We recommend the kit of the ceramic filter and the ceramic resonator which are shown in the table as below.  
It is necessary to meet the center frequency of the ceramic filter and the ceramic resonator, otherwise there are some cases that the characteristics get worse.

**FM DETECTION CIRCUIT**

For the FM detection circuit, detection coil is able to use instead of ceramic discriminator.  
 Recommended circuit and recommended coil are as follows.  
 In this case, please take care that  $V_{in} (lim.)$  falls a little.
