

5.1V AND ADJUSTABLE VOLTAGE REGULATOR WITH DISABLE AND RESET

- OUTPUT CURRENTS UP TO 750mA
- FIXED PRECISION OUTPUT 1 VOLTAGE
5.1V \pm 2%
- OUTPUT 2 VOLTAGE PROGRAMMABLE
FROM 2.8 TO 16V
- OUTPUT 1 WITH RESET FACILITY
- OUTPUT 2 WITH DISABLE BY TTL INPUT
- SHORT CIRCUIT PROTECTION AT BOTH
OUTPUTS
- THERMAL PROTECTION
- LOW DROP OUTPUT VOLTAGE

DESCRIPTION

The TDA8139 is a monolithic dual positive voltage regulator designed to provide precision output voltages of 5.1V and adjustable at currents up to 750mA.

An internal reset circuit generates a reset pulse when the output 1 decrease below the regulated voltage value.

Output 2 can be disabled by TTL input.

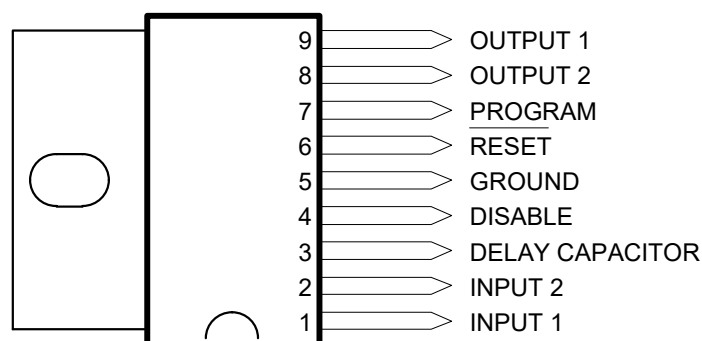

Short circuit and thermal protections are included.

Note 1 : The output short circuit currents are tested one channel at time.
During a short circuit a large consumption of power occurs, but the thermal protection circuit prevents any excessive temperature.
Safe permanent short-circuit is only guaranteed for input voltages up to 16V.

CIRCUIT DESCRIPTION

The TDA8139 is a dual voltage regulator with Reset and Disable.

The two regulation parts are supplied from one voltage reference circuit trimmed by zener zap during EWS test. Since the supply voltage of this last is connected at Pin 1 (V_{IN1}), the regulator 2 will not work if the Pin 1 is not supplied.

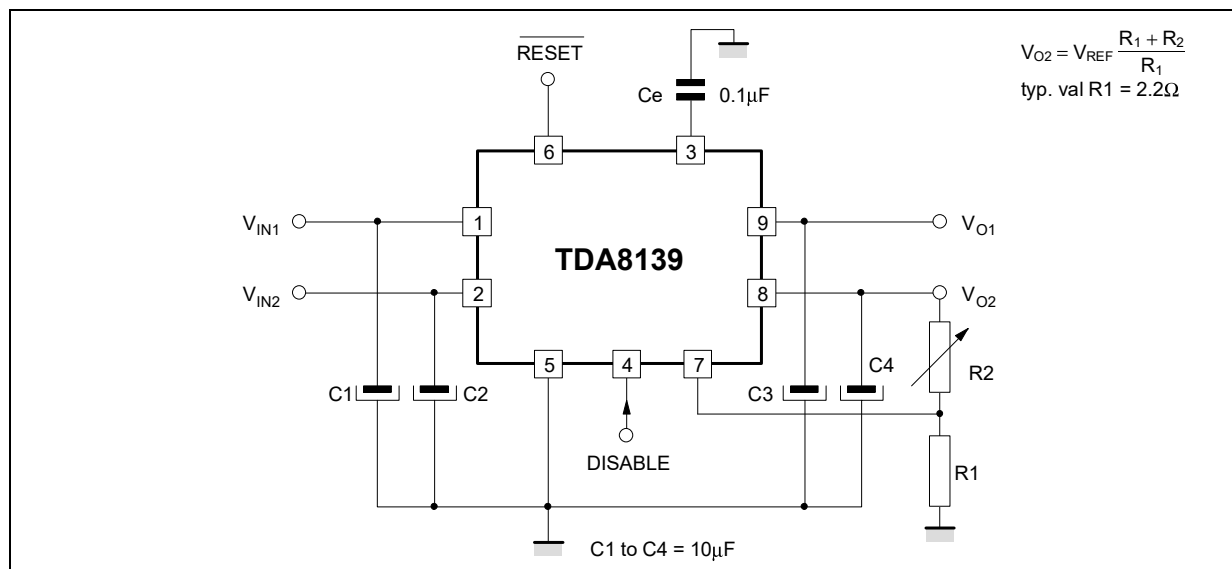

The outputs stages have been realized in darlington configuration with a drop typical of 1.2V.

The disable circuit, switch-off the output 2 if a voltage lower than 0.8V is applied at pin 4.

The Reset circuit checks the voltage at the output 1. If this one goes below $V_{OUT} - 0.25V$ (4.85V Typ.), the comparator "a" (see Figure 1) discharges rapidly the capacitor C_e and the reset output goes at once low. When the voltage at the OUT 1 rises above $V_{OUT} - 0.2V$ (4.9V Typ.), the voltage V_{C_e} increases linearly to 2.5V corresponding to a delay t_d following the low : $t_d = \frac{C_e \cdot 2.5V}{10\mu A}$ (see figure 2),

then the reset output goes high again. To avoid glitches in the reset output, the second comparator "b" has a large hysteresis (1.9V).
